

Bibliography of 'Top 20' Articles/Reports Relating to Health Systems Strengthening with Faith-Based Health Providers in LMIC Contexts

This is a resource developed for the World Bank Group co-hosted conference on "[Religion and Sustainable Development: Building Partnerships to End Extreme Poverty](#)" in Washington D.C. July 2015

These materials are drawn from two databases, courtesy of [The International Religious Health Assets Programme](#) (IRHAP) and [The Collaborative for HIV and AIDS, Religion and Theology](#) (CHART)

These materials have been selected by Jill Olivier on the basis of her interpretation of their relevance to the conference session on Faith/Religion and Health Systems Strengthening – this is not intended to be a systematic review output, and the author takes all responsibility for the particular selection presented here.

This is a brief and somewhat eclectic mixture of materials, and therefore is not in any way representative of the many thousands of texts and useful pieces of research available that are relevant to faith-based health systems and services in LMIC settings. This is intended as a guide towards different sorts of 'evidence' available. *These materials (like the broader evidence-base) has a bias towards literature addressing Christian and African health services, and English publications.*
